SUMMARY

Full Stack Developer (MERN) and Flutter mobile developer with hands-on experience designing and building a production college ERP system, a MERN-based government voter management platform, and multiple e-commerce applications. Comfortable owning a feature end-to-end — database schema, REST APIs, role-based admin dashboards, verification/approval workflows, and mobile app release to the Play Store.

EXPERIENCE

Hybrid App & Web Developer — GGI Connect ERP System — *Gulzar Group of Institutions* Feb 2026 – Present

- Joined as the second developer on the college's ERP platform; for the first three months, built the companion Flutter mobile app ("GGI Connect") that mirrors the web ERP's functionality, then moved into full-stack (frontend + backend) web development on the hiring/HR module from month four onward.
- **Admin dashboard:** built modules for Academic Affairs, Student Affairs, Staff Attendance & Leave, HR & Recruitment, Notifications/Announcements, and System Configuration — including bulk student data upload, employee tracking, session/semester management, and student grievance handling.
- **Teacher & HOD dashboards:** implemented timetable upload/view, MST result upload, internal marks calculation, course material and handout uploads, scheme/syllabus listing, student attendance tracking, and academic calendar views.
- **Executive Director & Non-Teaching dashboards:** built interview panel review queues, leave approval flows, OD (on-duty) request/inbox, face-sample registration for attendance, and a dedicated attendance calendar and leave-management flow for non-teaching staff.
- **HR & Recruitment module (web):** designed and built Manpower Requests, Manpower Request Chains, an Approval Queue, Candidate Applications, Interview Panels with configurable panel setup, an Offer Desk, and an Onboarding Queue, with automated email notifications sent to both candidates and HR at every stage of the pipeline.
- **Mobile app:** built and shipped the Flutter/Dart app to the Google Play Store under the name "GGI Connect," configuring role-based views (Admin, Teacher, HOD, Executive Director, Non-Teaching) and a range of push/in-app notifications across modules; the HR/hiring workflows are surfaced to the relevant accounts via an in-app WebView.

MERN Full Stack Developer Intern — *Digiverse Technologies, Ludhiana* 4 months

- **Voters Dashboard (government project):** built a MERN platform for managing Punjab voter records with two roles — Admin and User (Verifier). Admin imports voter data in bulk from Excel into the database and creates Verifier accounts scoped to a specific caste, village, area, ward, part, section, or age range.
- **Verification workflow:** Verifiers can only view voters within their assigned category, and update a voter's details (e.g. phone number, address) after in-person verification; updates are routed to the admin for approval before the database is updated.
- **Admin controls:** built an Admin panel to view, edit, delete, and manage Verifier (user) credentials, including changing and viewing passwords for user accounts.
- **T-Shirt E-Commerce Website:** built an admin panel/dashboard to manage the full product catalog — single shirts, packs, combo packs, and custom packs — with the storefront reading live from admin-managed inventory.
- **FlowerNGift:** built a full MERN e-commerce platform covering authentication, an admin panel, CRUD operations, product catalog management, and order handling.

PROJECTS

- **Plant Disease Detection System** — Final-year capstone, team of 5. Contributed to data collection, data cleaning/filtration, and testing for a machine-learning-based plant disease classifier.
- **Subject Manager App** — College assignment project. Native Android CRUD app (Java, Android Studio) to add, view, edit, and delete academic subjects.
- **Spotify Clone** — Practice project: a front-end-only recreation of the 2025 Spotify web interface (HTML, CSS, JavaScript), with the ability to add and play music, but no backend.
- **Netflix Clone** — Practice project: a landing page replicating Netflix's UI using HTML, CSS, and a small amount of JavaScript.

SKILLS

Languages: JavaScript, Java, Python, Dart

Frontend: React.js, HTML5, CSS3, Responsive Web Design, UI/UX Basics

Backend: Node.js, Express.js, REST API Design

Mobile Development: Flutter (Dart), Android Studio (Java), Google Play Console / App Publishing

Databases: MongoDB, MySQL, SQLite

Tools & Platforms: Git, GitHub, Firebase (push notifications), Postman

Core Concepts: CRUD Operations, Role-Based Access Control, Admin Panel/Dashboard Design, Authentication, Excel-to-Database Import Workflows, Approval/Verification Workflows, Automated Email Notifications

EDUCATION

Master of Computer Applications (MCA) — Chandigarh University, Punjab	2025 – Pursuing
Bachelor of Computer Applications (BCA) • CGPA 8.0 — Gulzar Group of Institutes	2022 – 2025
Senior Secondary (12th), CBSE • 54% — Green Land Convent School, Punjab	2022
Secondary (10th), CBSE • 70% — Green Land Convent School, Punjab	2020

CERTIFICATIONS

- Participant — GNA Hackathon 3.0, GNA University (29–30 March 2025)
- Participant — Next Quantum 2.0 Hackathon (4–5 April 2025)
- Summer Training in Web Development (11 June – 10 July 2024)
